

Case Study

Chauvet Europe Limited

“It’s a very supportive, collaborative process. The team are always responsive and quick to come back to us, providing clear explanations whenever we needed them. ESG Pro made what could have been a complex reporting exercise feel well-structured and straightforward. Their attention to detail and willingness to adapt to our needs gave us real confidence in both the data and the overall outcome.”

- Alistair Goodall, Financial Controller, Chauvet Europe

Industry: Lighting & Stage
Technology

GHG Reporting

The Client

Chauvet is a global lighting and technology company with operations across the UK, Europe, the US, and Mexico. Its UK activities include ChamSys, a specialist manufacturer in Southampton producing advanced lighting control systems. Alistair Goodall, Financial Controller for Chauvet Europe, manages financial oversight across the company’s European entities and supports the implementation of key reporting processes.

The Challenge

As the business grew, Chauvet reached the statutory threshold for Streamlined Energy and Carbon Reporting (SECR). The company needed a clear and accurate way to capture emissions data across its complex global logistics network, spanning manufacturing in China, warehousing in Belgium and the UK, and exports to the US and beyond. Gathering consistent, reliable data across these regions while maintaining compliance presented a significant challenge.

The Solution

ESG Pro worked with Chauvet to create a clear, repeatable process for greenhouse gas (GHG) reporting. Across two SECR cycles, our team streamlined data collection and analysis, extending coverage beyond legal requirements to include key Scope 3 areas such as logistics, travel, and waste. Alistair described the collaboration as “a supportive, collaborative process,” highlighting ESG Pro’s clarity, technical accuracy, and responsiveness throughout.

The Result

The collaboration delivered two successful SECR audits and complete confidence in Chauvet’s data. Between the first and second reporting cycles, Chauvet achieved a 12% reduction in carbon intensity, reflecting improved operational efficiency and stronger emissions management. The enhanced reporting framework strengthened data quality and transparency, turning compliance into a valuable management tool. Chauvet now benefits from trusted data, a consistent reporting framework, and a solid foundation for future ESG goals, a process Alistair says adds real value to the business.
