

Case Study

Portview Fit-Out Limited

“ ESG Pro have a customer-centric approach and go the extra mile to make the process easier. Their knowledge, attention to detail, and on-time delivery have been exceptional. ”

— Paul Lavery, COO, Portview Fit-Out Limited

Industry: FConstruction

ESG Reporting

GRI

The Client

Portview Fit-Out Limited is an award-winning interior fit-out specialist headquartered in Belfast. The company delivers bespoke interiors for prestigious clients such as Arsenal FC, Wembley Stadium, Tiffany & Co., and Samsung. With decades of experience across the UK and Ireland, Portview has earned a reputation for precision craftsmanship and operational excellence.

The Challenge

Recognising the growing importance of sustainability in construction, Portview sought to formalise its environmental, social, and governance (ESG) commitments. The leadership team wanted a GRI-based ESG rating and a full Annual Sustainability Report that met the highest international reporting standards. The goal was to consolidate all evidence gathering, auditing, and publication within a 12-month period.

The Solution

ESG Pro provided an end-to-end consultancy programme covering ESG reporting, carbon management, and policy development. The collaboration began with a detailed stakeholder materiality assessment, followed by the drafting of GRI, SASB, and IFC-aligned disclosures. ESG Pro's legal and consultancy teams supported Portview in creating internal policies, integrating management systems, and preparing a fully branded sustainability report. Their hands-on guidance ensured accuracy, transparency, and consistency throughout the process.

The Result

Portview achieved a BB ESG Rating, reflecting strong governance and a clear sustainability strategy. The final report, a 41-page Annual Sustainability Report accompanied by a 126-page GRI Content Index, positioned the company among regional leaders in responsible construction. The partnership with ESG Pro provided Portview with a repeatable framework for ongoing sustainability performance, clear metrics for improvement, and strengthened stakeholder trust.
